MAIL DATE

DELIVERY MODE

01/22/2009

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/550,635	<b>Applicant(s)</b> BARRENBURG ET AL.	
	<b>Examiner</b> ALYSON M. MERLINO	<b>Art Unit</b> 3673	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 14 October 2008.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 03 March 2008 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. The examiner acknowledges applicant's amendments to claims 1-29 filed 14 October 2008.

### ***Claim Objections***

2. Claims 1-29 are objected to because of the following informalities:
  - a. In regards to claim 1, on page 7, lines 9 and 10, the phrase "the longitudinal plate edge of the tumbler" should be changed to "the longitudinal plate edge of each of the tumblers."
  - b. In regards to claim 1, on page 8, line 1, the phrase "each of" should be inserted between the word "on" and the phrase "the tumblers."
  - c. In regards to claim 1, on page 8, line 4, the phrase "the flank pairs" should be changed to "the at least one pair of oppositely-facing flanks," and in line 5, the phrase "the opposing flanks" should be changed to "the at least one pair of opposing flanks."
  - d. In regards to claim 1, on page 8, line 14, the phrase "of the at least one pair of oppositely-facing flanks" should be inserted after the phrase "a flank pair," and the phrase "of the at least one pair of opposing flanks" should be inserted after the phrase "of the opposing flanks."
  - e. In regards to claims 2-29, these claims should be thoroughly reviewed and amended to ensure that the claims recite consistent terminology, specifically, in regards to the flanks, as discussed in regards to claim 1 above.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear what applicant intends to claim with the phrase "offset from each other in the height direction in the case of the tumblers with control edges in different positions." Specifically, it is unclear whether applicant intends to claim that each tumbler has specific flank positions and corresponding control edge positions. For examination purposes, the claim will be given a broad interpretation until further clarification from applicant.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3673

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. **Claims 1-29 are rejected** under 35 U.S.C. 103(a) as being unpatentable over Demouy (EP 0 879 927 A1) in view of Cook (US-5826451).

8. **In regards to claim 1**, Demouy discloses a lock cylinder (Figure 8) including a cylinder housing 15 and a cylinder core 10 rotatably support in the housing (Figure 8), and a key 18 with a defined longitudinal profile being assigned to the core (Figure 9). Demouy further discloses a group of diametric shafts 14 arranged in a row in the axial direction of the cylinder core (Figure 1), which hold plate-shaped tumblers 12 that include longitudinal edges that are free to slide longitudinally along guide surfaces 42 (apparent from Figures 8 and 9) of the shafts. Demouy discloses that each tumbler has a control edge (see figure below) in correspondence with the longitudinal key (Figure 9), and each control edge being located at a defined height (apparent from profile of key, Figure 1). Demouy further discloses a radial opening 33 in the cylinder core for insertion of an insert 32, with an outer end (end near indicator of reference characters 32, Figure 8) of the insert never projects beyond an external contour of the cylinder core after insertion of the insert in the opening with the insert being fixed in position (apparent from Figures 8 and 9) in the opening, whereas an inner end (end opposite the outer end, closest to tumbler 12, Figure 8) always engages in a cutout 36 in the facing edge of the longitudinal plate edge of each of the tumblers (Figures 1, 7, and 8) during operation of the lock cylinder (apparent from Figure 9). Demouy also discloses that each of the tumblers are secured in the cylinder core (apparent from Figure 1), and that

Art Unit: 3673

the insert consists of a non-displaceably positioned comb-shaped body (apparent from Figures 3 and 8) with radial teeth 40 that have inner ends that include a profile with at least one pair of oppositely-facing flanks (see figure below). Demouy discloses that the cutouts in the tumblers have at least one pair of opposing flanks 38 (Figure 7), and the flank pairs and the opposing flank pairs are arranged so that the control edges of at least two tumblers are at the same height (apparent from Figure 1). Demouy further discloses that in a rest position of each of the tumblers, only one of the flanks of a flank pair of the at least one pair of oppositely-facing flanks rests against one of the opposing flanks of the at least one pair of opposing flanks (apparent from Figure 8) and in an actuated position the other flank of the flank pair meets the other opposing flank (apparent that maximum displacement of tumbler 12 upward would have the bottom flank meet the other opposing flank, Figure 9). Demouy fails to disclose that the tumblers are spring-loaded, and that the at least one pair of opposing flanks of the tumblers are in different positions on each of the tumblers. Cook teaches a lock cylinder (Figure 4) having tumblers 14 that are spring-loaded (Col. 22, lines 6-20), with each of the tumblers having a cutout (portion near reference character 14b, Figure 1), and that the cutouts of the tumblers have at least one pair of opposing flanks (portions engaging flanks of insert 16, Figure 4), which are in different positions on the tumblers (apparent from Figures 2 and 3). Since specifying that the tumblers are spring-loaded and the opposing flanks are in different positions on each of the tumblers would not hinder the ability of the tumblers to be moved between a rest position and an actuated position, it would have been obvious to one of ordinary skill in the art at the time the

Art Unit: 3673

invention was made to specify that the tumblers are spring-loaded and the opposing flanks are in different positions on each of the tumblers in order to enhance the security of the lock cylinder.

9. **In regards to claims 2, 3, and 4**, Cook teaches a plurality of similar cylinder cores (Figures 4-6) can be used with a set of different combs (combs shown in Figures 5 and 7-13) that are provided with different profiles. Cook further teaches that the teeth of the combs have similar profiles and are arranged in different sequences on the comb (Figures 4-13) where the comb is used with a cylinder core of uniform type (apparent from Figures 4-13). Cook also teaches that the profiles of the teeth on the comb are of similar design (Figures 2 and 3).

10. **In regards to claim 5**, Demouy discloses that the opposing flanks of the cutouts are offset from each other in the height direction (apparent from Figure 7).

11. **In regards to claim 6**, Demouy fails to disclose that the inner ends of the teeth of the comb (ends engaging the tumbler, Figure 8) are convexly profiled. Cook teaches that the inner ends of the teeth of the comb are convexly profiled (apparent from Figures 4 and 5) in the radial direction with at least two pairs of flanks (Figures 2-4), which are at different heights (Figures 2 and 3), and that the cutouts in the tumblers are concavely profiled (apparent from Figures 4 and 5) in the radial direction and have sections which form at least two pairs of opposing flanks (Figures 2-4). It would have been obvious to one of ordinary skill in the art at the time the invention was made to specify that the inner ends of the teeth of the comb are convexly profiled since a change in the shape of

Art Unit: 3673

a prior art device is a design consideration within the level of skill of one skilled in the art.

12. **In regards to claim 7**, Cook teaches that the teeth are positioned in similar openings of the cylinder core in two orientations (placement as shown in Figures 1-3).

13. **In regards to claim 9**, Demouy discloses that the maximum point of the tooth profile (near upper flank, see figure above) is positioned in the cylinder core so that it “essentially” lies on a traverse plane (plane extending from side of core with insert towards side with reference character 37, Figure 8) of the cylinder core.

14. **In regards to claim 10**, Cook teaches that a tooth of the comb has two pairs of flanks, an inner pair (flanks on either side closest to reference character 48, Figure 4) which are closer to the transverse plane (Figure 4) and an outer pair (flanks opposite the inner pair, Figure 4) which is further away from the transverse plane (Figure 4). It would have been obvious to one of ordinary skill in the art at the time the invention was made to specify that a tooth 40 of Demouy has two pairs of flanks since a change in the shape of a prior art device is a design consideration within the level of skill of one skilled in the art.

15. **In regards to claims 8 and 11-29**, Demouy in view of Cook teaches that the insert can include many different shaped teeth (as shown in Figures 4-13 of Cook) to engage correspondingly shaped cutouts in the tumblers (as shown in Figures 4-13 of Cook). Since Demouy in view of Cook teaches that the insert can be designed to have teeth of varying shapes to engage corresponding cutouts on tumblers of a cylinder core, it would have been obvious to one of ordinary skill in the art at the time the invention

Art Unit: 3673

was made to change the shape of the teeth of the insert and the cutouts of the tumblers in order to allow more variations of the tumbler and insert combination to enhance the security and versatility of the cylinder lock. Furthermore, there is not indication in the claims that the shape of applicant's insert and the corresponding cutouts is critical to the function of the cylinder lock, only that the shape of the teeth of the insert and the cutouts correspond so that they may engage each other. Therefore, since Demouy in view of Cook teaches that the insert and cutouts can vary in shape, it would have been obvious to one of ordinary skill in the art at the time the invention was made to change the corresponding shapes of the insert, as taught by Demouy in view of Cook, since a change in the shape of a prior art device is a design consideration within the skill of the art.

### ***Response to Arguments***

16. Applicant's arguments with respect to claims 1-29 have been considered but are moot in view of the new ground(s) of rejection.

17. The examiner appreciates applicant's amendments to the specification, and therefore, the specification objections set forth in the previous office action are withdrawn.

18. The examiner appreciates applicant's amendments to claims, and therefore, the claim objections and the rejections of the claims under 35 U.S.C. 112, second paragraph, excluding the 112, second paragraph, rejection of claim 5, set forth in the previous office action are withdrawn.

Art Unit: 3673

19. In regards to the 112, second paragraph, rejection of claim 5, the rejection was maintained because claim 5 was not amended and applicant did not set forth any arguments regarding this claim.

***Conclusion***

20. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALYSON M. MERLINO whose telephone number is (571)272-2219. The examiner can normally be reached on Monday through Friday, 7:30 - 5:00.

Art Unit: 3673

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia Engle can be reached on (571) 272-6660. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
